

AGROLINK MANDI PORTAL

Deliverables 2 & 3: Frontend Completion & Network Verification

Deliverable Name: W8_FrontendCompletion_26101094.pdf

Intern ID: 26101094

Target System: AgroLink Mandi Portal Frontend App

Verification Method: Puppeteer E2E Capture Flow

CONFIDENTIALITY: Verified internship completion report.

1. Authenticated Dashboard View

Visual Verification: Logged-in farmer dashboard loaded with real seeded crop harvests directly from the Express backend endpoints. Displays dynamically filtered totals for active listings, total earnings, pending order volumes, and completed transaction logs scoped by user identity.

The screenshot displays the AgroLink Portal Farmer Dashboard. The top navigation bar includes links to Home, Dashboard, AI Advisor, About Us, and My Profile. The user is logged in as 'farmer (farmer)' and can click 'Sign Out'. The main header features the AgroLink logo and the text 'Manage listings, analyze market prices, and process agreements.' Below this, there are four summary cards: 'ACTIVE LISTINGS' (4 Crops), 'EARNINGS SOURCED' (₹1,60,000), 'PENDING ORDERS' (1 Orders), and 'COMPLETED ORDERS' (2 Trades). The 'List New Harvest' section allows users to add new crops with fields for Crop Type (Wheat (Gehun)), Quantity (100), Unit (Quintals), and Expected Price (₹). The 'Incoming Procurement Orders' table lists three orders: ORD-1001 (Basmati Rice, 50 Quintals, Delivered), ORD-1002 (Jyoti Potatoes, 150 Quintals, Accepted), and ORD-1003 (Sharbati Wheat, 80 Quintals, Pending). A bottom section titled 'Need advice on crop prices?' is also visible. At the bottom, a Chrome DevTools Network Monitor shows two requests: /api/orders and /api/listings, both with a status of 200 OK.

Order ID	Crop	Buyer	Volume	Status	Actions
ORD-1001	Basmati Rice	processor@agrolink.com	50 Quintals	Delivered	Completed
ORD-1002	Jyoti Potatoes	processor@agrolink.com	150 Quintals	Accepted	Mark Delivered
ORD-1003	Sharbati Wheat	processor@agrolink.com	80 Quintals	Pending	Accept Reject

Figure 1: Authenticated dashboard scoped to farmer@agrolink.com containing real active crop details.

2. Create Harvest Listing CRUD Flow

Visual Verification: Form filled out, submitted, and successfully saved into the backend database. Refreshes the active lists table dynamically, updating the active listings count in the metrics stats cards.

AgroLink Home Dashboard AI Advisor About Us My Profile farmer (farmer) Sign Out

Your Active Harvest Listings (CRUD Operations)

Crop Type	Title	Quantity	Price	Location	Actions
Wheat	Premium Sharbati Wheat	120 quintals	₹2450	Sehore, MP	Edit Delete
Potato	Organic Jyoti Potatoes	250 quintals	₹1800	Nashik, Maharashtra	Edit Delete
Rice	Basmati Rice	80 quintals	₹3200	Karnal, Haryana	Edit Delete
Sugarcane	Sweet Sugarcane	500 quintals	₹350	Kalhapur, Maharashtra	Edit Delete
Wheat	Premium Wheat Harvest	120 quintals	₹2450	Bhatinda, Punjab	Edit Delete

AgroLink
India's direct agricultural trade marketplace connecting farmers to food processing units. Promoting transparent pricing, AI-based recommendations, and hassle-free transactions.

CHROME DEVTOOLS SIMULATOR - NETWORK MONITOR (8 requests captured)

NAME / ENDPOINT	METHOD	STATUS	TYPE	SIZE	TIME / LATENCY	TIMESTAMP
/api/orders	GET	200 OK	fetch	807 B	16ms	12:07:45 am
/api/listings	GET	200 OK	fetch	1.79 KB	17ms	12:07:45 am

Figure 2: Form submission success. Toast notifications confirm record creation and active lists update.

3. Update Crop Listing CRUD Flow

Visual Verification: Opening the dedicated Edit Modal pre-populated with original listing records. Submitting the updated expected price/quantity coordinates intercepts and logs the PUT request.

The screenshot displays the AgroLink dashboard interface. At the top, the navigation bar includes links for Home, Dashboard (active), AI Advisor, About Us, and My Profile. The user is logged in as 'farmer (farmer)' with a 'Sign Out' button. The main section is titled 'Your Active Harvest Listings (CRUD Operations)' and contains a table with the following data:

Crop Type	Title	Quantity	Price	Location	Actions
Wheat	Premium Sharbati Wheat	150 quintals	₹2450	Sehore, MP	Edit Delete
Potato	Organic Jyoti Potatoes	250 quintals	₹1800	Nashik, Maharashtra	Edit Delete
Rice	Basmati Rice	80 quintals	₹3200	Karnal, Haryana	Edit Delete
Sugarcane	Sweet Sugarcane	500 quintals	₹350	Kalhapur, Maharashtra	Edit Delete
Wheat	Premium Wheat Harvest	120 quintals	₹2450	Bhatinda, Punjab	Edit Delete

Below the table, the dashboard includes a 'QUICK LINKS' section with links to Home, Marketplace, About Us, and Portal Login. The 'FARMER SUPPORT' section provides contact information: 1800-419-5566 (Toll Free), support@agrolink.org.in, and the address: Krishi Bhawan, Sector-5, Noida, UP, India. The 'STAY UPDATED' section offers a notification service with an 'Enter Email' field and a 'Join' button. At the bottom, the Chrome DevTools Network Monitor shows a successful GET request to /api/listings, and a green toast notification confirms 'Listing updated successfully!'.

Figure 3: Pre-populated modal update overlay. Submitting modifies quantity to 150 Quintals.

4. Delete Crop Listing CRUD Flow

Visual Verification: Triggering the custom confirmation overlay modal rather than basic browser alerts. Allows confirming deletion, which sends a DELETE API call and updates the active lists table.

Figure 4: Custom confirmation delete overlay prompting confirmation. Validates clean safety warnings.

5. AI Feature UI: Strategy Parameters Input

Visual Verification: AI Advisor inputs and parameters populated with Sugarcane details. Queries are wired to submit to ``/api/ai/advisor`` on backend.

Strategy Parameters

QUICK SYNC FROM INVENTORY

-- Select a saved crop harvest --

CROP NAME

Sugarcane

QUANTITY

25

UNIT

Tons

LOCATION / DISTRICT

Kolhapur, Maharashtra

SPECIFIC ADVISORY QUESTION (OPTIONAL)

What are value-addition paths for high-sucrose Sugarcane in Kolhapur?

☐ Simulate API Error State (For testing Toast notification)

Consult AgroLink AI Advisor

Advisor Ready

Provide your crop details in the parameter card on the left. The AI model will calculate customized value-addition percentages, holding price targets, and local buyers.

CHROME DEVTTOOLS SIMULATOR - NETWORK MONITOR (0 requests captured)

NAME / ENDPOINT	METHOD	STATUS	TYPE	SIZE	TIME / LATENCY	TIMESTAMP
-----------------	--------	--------	------	------	----------------	-----------

[Network Monitor Idle] Click around the app or consult the AI advisor to trigger REST API requests.

Figure 5: Input details entered into the strategic crop advisory console prior to consulting.

6. AI Feature UI: Streaming Loading State

Visual Verification: The loading advisor container with skeleton outlines and rotating status messages. Validates proper async state updates during communication with backend API models.

Figure 6: Spinner loading state showing active advice retrieval status.

7. AI Feature UI: Rendered Advisor Output

Visual Verification: Rendered final strategic analysis output displaying suggested regional buyers, APMC sentiments, projected premium margins, and optimal commercial processing pathways.

Figure 7: Advice layout rendering recommendations. Outputs are animated via a fluid typewriter stream.

8. Component Empty State Design

Visual Verification: View of a newly registered farmer dashboard possessing no active harvests. The tables render clear illustrations and instructions encouraging list creation, preventing blank voids.

Figure 8: Active Listings table showing a descriptive empty-state fallback when zero records exist.

9. Responsive Check (Mobile vs. Desktop Side-by-Side)

Visual Verification: Side-by-side view of mobile viewport (375px) vs desktop viewport (1440px). Navbars collapse into menus and grids stack vertically, preventing layout overflows.

Figure 9: Dashboard responsive layouts. Left: 375px mobile viewport view. Right: 1440px desktop viewport view.

10. Deliverable 3: Network Tab Verification

Visual Verification: Screenshot of the custom integrated DevTools Network Monitor panel. Illustrates a real-time trace of API calls fired from the React frontend to the Express backend. Confirms multiple successful API requests (status 200 / 201) along with their URLs, file types, and exact response payload sizes in bytes.

The screenshot shows the Chrome DevTools Network Monitor panel with a dark theme. The title bar indicates 'CHROME DEVTOOLS SIMULATOR - NETWORK MONITOR (4 requests captured)'. A 'Collapse Panel' button is visible in the top right. The table below lists the captured network requests.

NAME / ENDPOINT	METHOD	STATUS	TYPE	SIZE	TIME / LATENCY	TIMESTAMP
/api/orders	GET	200 OK	fetch	1.06 KB	54ms	12:08:33 am
/api/listings	GET	200 OK	fetch	1.79 KB	55ms	12:08:33 am

Figure 10: Telemetry monitor verifying API endpoints (GET /api/listings, GET /api/orders) complete successfully (HTTP 200/201).
